

RAIN-SAFE

The simple, effective means for detecting rainfall and controlling many different systems such as;

HAZARD LIGHTS & WARNING LIGHTS

as used for

ROAD SAFETY & TRAFFIC CONTROL

Motorists can be warned of possibly dangerous conditions existing, due to the wetting of the road surface by even light rainfall when system used in conjunction with some form of “Hazard Lights or Warning Devices”.

BIG SAVINGS are possible with these systems being fully un-manned and can provide inputs to traffic control systems and “HOT-SPOT” recording devices.

EXTRA SAVINGS in expenditure are possible for Emergency Services Departments, ie.. Ambulance, Police and Accident Rescue, due to reduction in call-outs to accidents.
